                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1075 AGGCTGCCATCTTTGCCAAGCACAGAGGTCGCCCGGAGAGCGCTTCCTGTGCGGGGGCA 1134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence was obtained from cDNA prepd. from mRNA extracted from-bowes melanoma cells. The cDNA was used to construct a gene library which was screened with a partial t-PA cDNA clone. Plasmid pKG12 was isolated and shown to comprise the whole coding region for human t-PA as well as 10.2bp 5'flanking, 760 bp 3' flanking DNA and a poly A tail. See also AAN91608. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             175

Vector pEMp1-tpa is an example of a vector of the invention. Pref.

the blocking element is a promoter sequence oriented with its native

s end disposed proximal to the enhancer element and its 5' end
disposed blocking element comprises a promoter sequence with its 5'
end disposed proximal to the enhancer element and, at its 3' end, a
gene encoding for a different protein of interest, (see FT). The
vector pEMp1 was constructed by inserting an enhancer-blocking
element into pEM1.

The CDNA fragment was inserted into the unique KhoI site present in
both pEM1 and pEMp1. Of 26 transformants obtd. with pEM1-tpa, 5
produced TPA at levels of 140-500 IU/m1. Of 16 transformants obtd.

```

```
The plasmid was prepd by cleaving the very long 3' UT of t-PA cDNA (which causes mRNA instability) 34 nucleotides downstream of stop codon and inserting it into a pEMp1 vector. The pEMp1 vector was constructed from the following components (see feature table):

(a) a 2.25 PvuII-BamHI fragment from pSV2-gpt contg. the SV40 enhancer and early region promoter, the E.coli gpt gene, the SV40 small tumour antigen intervening sequence, and the SV40 termination and polyadenylation signals;

(b) a 2.3 kb PvuII-ECORI fragment from pBR322 contg. the ampicillinase gene and the bacterial origin of replication;

(c) a 0.3 kb PvuII-ECORI fragment contg. an Ig heavy chain enhancer;

(d) a 0.25 kb SacI-BQ1II fragment from the 3' UT of Ig kappa light chain gene; and

(f) a 0.26 kb xbaI-batNI fragment contg. the Ig light chain promoter,

(f) a 0.26 kb xbaI-batNI fragment contg. the Ig light chain promoter,

The expression plasmid can be used to transform host cells esp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                933 GCCAGCCTCAGTTTCGCATCAAAGGAGGCTCTTCGCCGACATCGCCTCCCACCCTCGCC 992

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A DNA construct (AAT27586) codes for a novel plasminogen activator (AAR96222) in which the kringle KI domain (AAR96221) of plasminogen replaces the native KI domain of tissue plasminogen activator (tPA) (AAR96220). It was obtd. by inserting a synthetic plasminogen KI domain DNA (AAT27586) into tPA cDNA and can be expressed in transformed Escherichia coll RRI cells (FERM P-9272). Novel plasminogen activators are produced that show increased clot lysing specificity or plasma half-life.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          793
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 6, Application US/09969271

Patent No. US20020098179A1

GENERAL INFORMATION:

APPLICANT: Pfizer Inc. (All designated States except GB and EP (GB));

APPLICANT: Pfizer Limited (GB and EP (GB) only);

TITLE OF INVENTION: Pharmaceutical Combinations

FILE REFERENCE: PCS.10951APME

CURRENT APPLICATION NUMBER: US/09/969,271

PRIOR PILING DATE: 2001-10-01

PRIOR PILING DATE: 2001-10-01

PRIOR FILING DATE: 2001-10-01

SOFTWARE: FastSEQ for Windows Version 4.0

SOFTWARE: PastSEQ for Windows Version 4.0

Application US/09987455

Publication No. US2003004972941

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Jiradej Manosroi

APPLICANT: Chatchai Tayapiwatana

FILE OF INVENTION: Methods for Large Scale Production of Recombinant

TITLE OF INVENTION: Methods for Large Scale Production

FILE OF INVENTION: Methods for Large Scale Production

CURRENT APPLICATION NUMBER: US/09/987,455

CURRENT APPLICATION NUMBER: 60/269,574

PRIOR FILING DATE: 2001-11-14

PRIOR FILING DATE: 2001-02-15

PRIOR FILING DATE: 2001-11-14

NUMBER: OF SEQ ID NOS: 25

SOFTWARE: PatentIn Ver. 2.1

SEQ ID NO 4

LENGTH: 1065

TYPE: DNA

CREANISM: Artificial Sequence
